

**Amendments to and Listing of Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (original) A system, adapted for use with a distributed data delivery network, for duplicating data being distributed in the network, comprising:

a data storage; and

a data distributor, adapted to distribute data as streaming data at a first bitrate to at least one data server in the network, while writing said data to said data storage at substantially said first bitrate.

2. (original) A system as claimed in claim 1, wherein:

said data distributor comprises an encoder, adapted to encode said data to create said streaming data at said first bitrate.

3. (original) A system as claimed in claim 1, wherein:

said data storage includes a disk, and said data distributor is adapted to write said data to said disk at substantially said first bitrate.

4. (original) A system as claimed in claim 1, wherein:

said data storage is disposed at a data server in said network.

5. (original) A system as claimed in claim 1, wherein:

said data storage is disposed at one of said at least one data server in said network.

6. (original) A system as claimed in claim 1, further comprising:

a reader, adapted to read said data stored at said data storage at a read rate substantially equal to said first bitrate.

7. (original) A method for duplicating data being distributed in a distributed data delivery network, comprising:

distributing data as streaming data at a first bitrate to at least one data server in the network; and

writing said data to a data storage at substantially said first bitrate while performing said distributing step.

8. (original) A method as claimed in claim 7, wherein:

said data distributing step includes encoding said data to create said streaming data at said first bitrate.

9. (original) A method as claimed in claim 7, wherein:

said data storage includes a disk; and

said data distributing step includes writing said data to said disk at substantially said first bitrate.

10. (original) A method as claimed in claim 7, wherein:

said data storage is disposed at a data server in said network; and

said writing step writes said data to said data storage disposed at said data server.

11. (original) A method as claimed in claim 7, wherein:

said data storage is disposed at one of said at least one data server in said network;  
and

said writing step writes said data to said data storage disposed at said one of said at least one data server.

12. (original) A method as claimed in claim 7, further comprising:

reading said data stored at said data storage at a read rate substantially equal to said first bitrate.

13. (new) A system comprising:  
a distributed data delivery network; and  
means for delivery of streaming data at a first bitrate to at least one data server in the network, while writing said data to a data storage device at substantially said first bitrate, wherein said at least one data storage device comprises said data storage device.
